

Contents

Introduction	1
KLAUS KIRSTEN AND FLOYD L. WILLIAMS	
Introductory Lectures	
Lectures on zeta functions, L-functions and modular forms with some physical applications	7
FLOYD L. WILLIAMS	
Basic zeta functions and some applications in physics	101
KLAUS KIRSTEN	
Zeta functions and chaos	145
AUDREY TERRAS	
Vertex operators and modular forms	183
GEOFFREY MASON AND MICHAEL TUIITE	
Research Lectures	
Applications of elliptic and theta functions to FRLW cosmology with cosmological constant	279
JENNIE D'AMBROISE	
Integrable systems and 2D gravitation: How a soliton illuminates a black hole	295
SHABNAM BEHESHTI	
Functional determinants in higher dimensions using contour integrals	307
KLAUS KIRSTEN	
The role of the Patterson–Selberg zeta function of a hyperbolic cylinder in three-dimensional gravity with a negative cosmological constant	329
FLOYD L. WILLIAMS
